Real Estate Market Insights & Pricing Analysis Report

1. Project Overview

This project analyzes a real estate listings dataset to support data-driven investment and pricing decisions.
The goal is to transform raw property listing data into actionable insights for executive decision makers, enabling better understanding of market performance, regional opportunities, and property features that drive value.

The dashboard provides a comprehensive overview of the real estate market, focusing on pricing trends, property characteristics, and regional investment efficiency.

---

2. Business Objectives

The project addresses the following strategic questions:

1️⃣ Which cities and governorates generate the highest property value per square meter?

2️⃣ Are we over-invested in low-performing regions?

3️⃣ What type of properties should be prioritized for investment next year?

The analysis is structured across three interactive dashboards:

- Market Overview
- Feature Analysis
- Regional Analysis

---

3. Data Preparation

Before building the dashboards, several data transformation and feature engineering steps were performed.

Key derived metrics

- Price per square meter
- Luxury score based on property features
- Property segment classification

- Room density and area categories
- Premium feature count

These transformations allowed deeper analysis of property value drivers and market segmentation.

---

4. Dashboard 1 – Market Overview

This dashboard provides a high-level view of the real estate market.

Key KPIs

- Average Property Price: 681,284 TND
- Total Listings: 6,315
- Average Price per Sqm: 2,615 TND
- Highest Property Price: 19,000,000 TND
- Luxury Property Ratio: ~63%

These indicators provide an immediate understanding of the overall market scale and pricing structure.

Market Insights

1️⃣ Premium segments dominate pricing

The premium property segment shows the highest price per square meter, significantly outperforming mid-range and economy properties.

This indicates that high-end developments drive the highest market value.

2️⃣ Large and very large properties command higher prices

Properties categorized as large or very large tend to achieve significantly higher average prices.

This suggests strong demand for spacious properties in high-value locations.

3️⃣ **High-value cities drive market prices**

Cities such as:

- **Carthage**
- **Sidi Thabet**
- **El Menzah**
- **La Marsa**

show the highest average property prices, indicating strong demand and premium real estate markets.

These locations represent key investment hubs.

---

5. Dashboard 2 – Feature Analysis

This dashboard evaluates how property characteristics influence pricing.

Key Insights

1️⃣ **Premium property features significantly increase prices**

Properties with the following features show the highest price premiums:

- **Mountain View**
- **Swimming Pool**
- **Garage**
- **Beach View**

These features are strong price drivers in the real estate market.

2️⃣ **Furnished properties command higher prices**

Properties that are fully furnished tend to achieve higher average selling prices compared to unfurnished properties.

This indicates that move-in ready properties attract higher market value.

3️⃣ **Number of rooms impacts property value**

Properties with more rooms generally command higher prices, reflecting buyer demand for larger living spaces.

This reinforces the trend that larger residential units deliver stronger returns.

4️⃣ **Luxury score correlates with price per sqm**

Properties with a higher luxury score consistently achieve higher price per square meter.

This confirms that premium features and property quality significantly influence pricing.

---

6. Dashboard 3 – Regional Analysis

This dashboard evaluates regional performance and investment efficiency.

Top Performing Regions

The governorates with the highest price per square meter include:

- **Tunis**
- **Sousse**
- **Ariana**
- **Monastir**
- **Kacbili**

These regions represent high-value real estate markets with strong pricing potential.

City-Level Insights

Cities such as:

- **Carthage**

- La Marsa
- La Goulette
- Le Kram

demonstrate the highest property prices per square meter, reflecting premium coastal or urban real estate markets.

Investment Efficiency Analysis

To evaluate regional investment performance, each governorate was classified into four categories based on:

- Listing volume
- Average price per square meter

Market Classification

Category	Meaning
🟢 Strong Market	High demand and strong pricing
🔵 Opportunity	Under-supplied but high value
🔴 Over-Invested	High listings but weak pricing
🟡 Low Priority	Low demand and low price

Key Findings

Strong Markets

Regions such as:

- Tunis
- Nabeul
- Ariana
- Sousse

show high demand and strong pricing performance, making them ideal targets for future investments.

Over-Invested Region

Ben Arous appears to be over-invested, with relatively high listing volumes but below-average price per square meter.

This suggests that supply may exceed demand in this market.

Opportunity Regions

Regions like:

- **Bizerte**
- **Kairouan**
- **Mahdia**
- **La Manouba**

show moderate listing levels but promising price potential, indicating possible investment opportunities.

. Business Questions & Key Findings

Question 1

Which cities and governorates generate the highest property value per square meter?

Answer

The analysis shows that several cities and governorates consistently achieve **the highest price per square meter**, indicating strong market demand and premium real estate value.

Top Cities by Price per Sqm

The highest-performing cities include:

- **Carthage**
- **La Marsa**
- **Le Kram**
- **La Goulette**
- **Douz**

These cities represent **high-value real estate markets**, often driven by strong demand, strategic locations, or premium property developments.

Top Governorates by Price per Sqm

The governorates with the highest price per square meter are:

- **Tunis**
- **Sousse**
- **Ariana**
- **Monastir**
- **Kacbili**

These regions demonstrate **strong real estate pricing power**, making them attractive markets for investment and development.

Question 2

Are we over-invested in low-performing regions?

Answer

To evaluate investment efficiency, each governorate was classified based on:

- **Listing volume (market supply)**
- **Average price per square meter (market performance)**

This classification resulted in four categories:

Category	Meaning
Strong Market	High demand and high prices
Opportunity	Low supply but strong prices
Over-Invested	High supply but weak prices
Low Priority	Low supply and weak prices

Key Finding

The analysis shows that **Ben Arous** appears to be **over-invested**.

This region has:

- A relatively **high number of listings**
- **Below-average price per square meter**

This suggests that **supply may exceed demand**, reducing price performance in the market.

Strategic Insight

Markets such as **Tunis, Nabeul, Ariana, and Sousse** demonstrate strong pricing performance and demand, making them more efficient investment locations.

Question 3

What type of properties should we prioritize next year?

Answer

The analysis of property characteristics shows that **luxury properties and properties with premium features generate the highest market value**.

Key Drivers of Property Value

The following features significantly increase property prices:

- **Mountain View**
- **Swimming Pool**
- **Garage**

- **Beach View**

These premium features create a **strong price premium in the real estate market**.

Property Size Impact

Properties with:

- **More rooms**
- **Medium to large sizes**

tend to achieve **higher average prices**, indicating strong demand for spacious properties.

Luxury Segment Performance

Luxury properties consistently achieve:

- Higher **average price**
- Higher **price per square meter**

This indicates that **premium real estate developments drive the highest market value**.

Final Recommendation

Based on the analysis, the following investment strategy is recommended:

1️⃣ Prioritize **luxury and premium properties**.

2️⃣ Focus on properties that include **high-value features such as pool, mountain view, and garage**.

3️⃣ Invest in **high-performing regions** such as:

- Tunis
- Nabeul
- Ariana
- Sousse

4️⃣ Reevaluate investments in **oversupplied markets** such as Ben Arous.
